

iKAN Link

www.ikansoftware.com

Are you interested in solving your paper problem but worried about complexity, cost and whether users will use it? We can help solve that problem with iKAN Link.

iKAN Link allows you to image enable any existing Windows application so your users store and access images right from their current application screen!

- Without modifying any application code
- Without changing your business process
- Without retraining end users
- Without rekeying data

With TruFile technology, iKAN Link can easily zone and extract information from your existing application and utilize the data to create consistent folder hierarchies and document names WITHOUT user intervention. Just press the Scan button on your screen and your document will be scanned, securely uploaded, and filed into your Virtual Document Center or SharePoint repository. Then simply click the View button to retrieve your document from the comfort of the same application. No disruption, no indexing, no kidding!

For batch processing, create TruFile barcode labels from your application screen and place on each document to eliminate duplicate data entry and accelerate your document acquisition. Documents are automatically separated, indexed, and filed using the barcode.

To convert that document pile with TruFile and iKAN Link today, call us at **713-426-4526**.

iKAN Link can image-enable virtually any application!

You can image enable any Windows application

- Link + Accounting Systems
- Link + Document Management Systems
- Link + AS/400 or "green screen" apps
- Link + Sharepoint
- Link + IBM Lotus or Quickr
- Link + Your custom in-house application

"Today we can estimate that the total spent on IT exceeds \$1 trillion per year. More amazingly, 75% of that is used for managing existing systems, most of which is dominated by the cost to manage complex software that has been built over the past 25 years."

-Timothy Chou, "The End of Software"
